## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-17, drawn to a bilirubin concentration measuring apparatus, classified in class 600, subclass 315.
  - II. Claims 18-19, drawn to a measurement data checking plate, classified in class 600, subclass 315.
  
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I. and II. are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II. has separate utility such as a calibration element for other concentration measuring devices. See MPEP § 806.05(d). The bilirubin concentration measuring device emits and receives light from a patient's skin. The electric signals from the receivers are processed to calculate the bilirubin concentration. The measuring device does not require the measurement plate for operation but can utilize it for calibration. The measurement data checking plate is an apparatus that emits light of different wavelengths which are read by receivers in bilirubin concentration measuring devices. The measurement data checking plate is functionally separate from the measuring device and can be used by other measurement devices.

Because these inventions are distinct for the reasons given above and the search required for Group II. is not required for Group I., restriction for examination purposes as indicated is proper.
